

AWS Elastic Beanstalk Node.js Application Deployment

Student Project Documentation

Introduction

AWS Elastic Beanstalk is a Platform as a Service (PaaS) that makes it easy to deploy and manage web applications. It automatically provisions infrastructure, load balancing, scaling, and monitoring.

Objective

To deploy a Node.js web application on AWS Elastic Beanstalk using the AWS Management Console and GitHub.

Requirements

AWS Account, Node.js application, GitHub repository, Internet connection.

Environment Details

Application Name: dharan-nodejs-app
Environment: Dharan-nodejs-app-env
Platform: Node.js 24 on Amazon Linux 2023
Region: US East (N. Virginia)

Deployment Steps

1. Login to AWS.
2. Open Elastic Beanstalk.
3. Create Application.
4. Select Node.js platform.
5. Create Environment.
6. Upload application.
7. Verify deployment.

Advantages

Easy deployment, automatic scaling, monitoring, health checks, integration with AWS services.

Conclusion

Elastic Beanstalk simplifies cloud application deployment and reduces infrastructure management effort.
