

CarePlus Hospital Management Website Project Report

Abstract

CarePlus Hospital is a responsive healthcare website developed to provide an online platform for patients to learn about hospital services, view doctors, and book appointments. The project demonstrates frontend web development concepts and deployment on a cloud server.

Introduction

The project aims to simplify communication between hospitals and patients through a modern web interface. The application is hosted on an AWS EC2 instance and accessed through a public IP address, demonstrating cloud deployment.

Objectives

- Build a responsive hospital website.
- Display hospital services and doctors.
- Allow online appointment booking.
- Deploy the application on AWS EC2.
- Improve accessibility and user experience.

Modules

Home page with navigation bar, emergency helpline banner, services section, doctors section, appointment booking form, contact section, and responsive user interface.

Technologies Used

HTML5, CSS3, JavaScript, Bootstrap, AWS EC2, Linux, Git, GitHub, and Git Bash were used to develop and deploy the application.

Deployment Process

The website files were uploaded to an AWS EC2 instance. A web server was configured and the application was made accessible using the instance public IP address. Git and GitHub were used for version control and project management.

Features

- Responsive design.
- Doctor profiles.
- Appointment booking form.
- Emergency contact banner.
- Easy navigation.
- Cloud deployment.
- User-friendly interface.

Advantages

The system provides quick appointment booking, easy access to hospital information, reduced paperwork, improved patient convenience, centralized information, and scalable cloud hosting.

Future Enhancements

Patient login, doctor dashboard, online payments, medical records, email/SMS notifications, video consultation, and database integration can be added in future versions.

Conclusion

The CarePlus Hospital website successfully demonstrates a cloud-hosted healthcare application. It provides an attractive interface, simplifies appointment booking, and showcases practical web development, Linux, GitHub, and AWS deployment skills.
